UNPACKING
Unpack carefully. There are glass parts. BE SURE TO REMOVE ALL FOAM PACKING FILLER BEFORE APPLYING POWER TO THE UNIT. Check to ensure that the following items are included.

- Vaporizer top, assembled complete with:
  - Glass Beaker (101.0025)
  - Silicon Gasket (101.0027)
  - Complete Brace (101.0017)
  - No Drip Nozzle (101.0068)
- Roller Stand (101.0020), assembled with:
  - 5 Roller Casters (101.0022)
  - Telescoping Pole w/ Knob (101.0023)

WARNING
USE ONLY DISTILLED WATER WITH THIS MACHINE. DISTILLED WATER SHOULD BE USED TO HELP PROLONG THE LIFE OF THE MACHINE. DO NOT RUN CHEMICALS THROUGH THE APPLIANCE SUCH AS CLEANING AGENTS, VINEGAR, OR AROMA ADDITIVES. THESE CLOG THE WATER WAYS AND LEAVE DEPOSITS.

TO AVOID OVERHEATING OR BURNOUT DO NOT TEST RUN THE APPLIANCE DRY.

TO PREVENT WATER FROM SPOUTING - ALWAYS MAINTAIN THE DISTILLED WATER LEVEL AT THE PROPER LEVEL BETWEEN THE TOP AND BOTTOM RED LINES.

TO EXTEND THE LIFECYCLE OF THE HEATING ELEMENT AND TO PREVENT THE GLASS JAR FROM CRACKING, DO NOT ADD COLD WATER WHILE WATER IS HOT. WAIT FOR WATER TO COOL BEFORE ADDING MORE WATER.

CAUTION: DO NOT ATTEMPT TO REMOVE OR INSERT THE GLASS JAR WHEN HOT, DURING USE, OR IMMEDIATELY AFTER USE.

BEFORE TURNING ON THE VAPORIZER, FILL THE WATER JAR TO THE TOP RED LINE. DO NOT OVERFILL ABOVE TOP RED LINE.

DAILY MAINTENANCE
Vaporizer should be cleaned and inspected on a daily basis or once before each day’s use.
- Check to see that the vaporizer is in good working condition and that there are no exposed parts or wires.
- Check that the vaporizer is securely mounted on its stand.
- Check for broken jars, parts, and etc.

OPERATION
A. Filling the Water Jar
   a. Remove glass jar. Hold the jar with one hand and use the other hand to simultaneously turn the retaining screw knob. Swing the brace away and carefully remove the glass jar.
   b. Check for the gasket resting atop the glass jar. Its function is to help seal the water jar and to prevent water from leaking.
   c. Pour distilled water into the glass jar. Always maintain proper water levels between the top and bottom red water level guides.
   d. To prevent water from spouting do not exceed the top red line.
   e. Empty the water jar at the end of each day’s use.
B. Turn the timer knob to the desired time setting.
C. Wait 7-10 minutes for steam to appear.
D. Turn the ozone switch on as needed.
E. Positioning the Steam Arm
   a. Cover the client's upper chest area with towel or cloth to absorb excess moisture.
   b. Always maintain a minimum distance of 12 inches from face.
   c. Wait until the steam is a steady fine mist before directing the steam towards the client.
   d. Position the steam arm in an upward direction so the steam will travel up the torso towards the face.

AROMA THERAPY NOZZLE (Item No. 101.0066)
The AT-1 Aroma Therapy Nozzle is an optional item that can be easily attached to the regular nozzle for the use of aromatic therapy oil. This allows the client to experience the benefits of aromatic oils while simultaneously protecting the vaporizer from clogging and spouting.

CAUTION
DO NOT RUN HARSH CHEMICALS OR CLEANING AGENTS THROUGH THIS MACHINE.
ONLY USE ESSENTIAL OILS ON THE AROMA THERAPY NOZZLE.

OZONE
Ozone is a form of oxygen sometimes used as a form of disinfectant. The ozone function in the facial vaporizer is an option. Check with applicable regulatory agencies such as the Department of Health and the Cosmetology State Board concerning the use of ozone in your area. To activate the ozone function, use the on/off switch located next to the timer knob. When ozone is in use, the green activate lamp will light up.

MAINTENANCE
All appliances should be inspected & cleaned once a week.
   A. A safety check should be performed before the start of each day's use. If unit is unsafe to use or needs repair, please call the manufacturer for instructions on how to send your machine in for service.
   B. Only distilled water should be used in the vaporizer. The use of tap or filtered water will eventually cause malfunction of the machine, due to calcium and mineral deposits.
   C. Do not use harsh chemical to clean the appliance. Use a soft brush to clean heating elements.
   D. Always maintain the distilled water level above the lower red line and below the top red line. In order to protect the heating element from burning out, the appliance has a safety feature installed. The low water level sensor safety fuse will shut off the appliance if the water is below the lower red line marked on the water jar. If the water is constantly below the lower red line, the low water level sensor safety fuse may burn out.

TROUBLE SHOOTING
When machine fails to work properly, use the following directions to detect the cause of the problem:

BASIC TROUBLESHOOTING
   A. Check the power cord for proper connection.
   B. Make sure the water level is between the top and bottom red lines.
   C. Check the power source by connecting another electrical appliance to the AC outlet.
   D. If the water level is repeatedly below the lower red line, the thermostat may burn out. If the thermostat has burned out, the power lamp will not light and the vaporizer will not turn on. Please contact an authorized agent for repair.
   E. If the problem persists, please contact your dealer for assistance. To prevent an electrical shock, PLEASE DO NOT TAKE THE MACHINE APART.
STEAM ESCAPING FROM JAR
Symptom(s):
• Steam/water is escaping from the jar.
Wait until the jar has cooled, then try to tighten the retaining screw located beneath the jar for a tight seal. Check that the gasket ring is atop the water jar and in good condition.

HEATING ELEMENT SHUTS OFF
Symptom(s):
• There is power but the heating element has shut-off.
• The vaporizer has been in use continuously.
Move the timer knob to the OFF position.
Wait 5-10 minutes before turning the vaporizer back on. Restart the vaporizer.
If your unit(s) becomes too hot or if the water level falls below the red line, the thermostat will shut off the heating element. After cooling to the proper temperature, the element will operate normally.
Wait until both the heating element and glass jar cools before adding water.

EXTERNAL FUSE
Symptom(s):
• There is power but no steam.
• The vaporizer starts up but then stops.
Check to see that the external fuse is in proper working condition.
This fuse should be a minimum 8amps. A 10amp fuse is optimal.
This fuse will only burn out if the machine is repeatedly used with low water levels or no water.

INTERNAL FUSE
Symptom(s):
• There is no power/ the power lamp does not light up.
• There is a burnt smell.
The internal thermostat (temperature control) and thermostat fuse protector may be damaged.
There are no user-serviceable parts inside.
The unit must be sent in for repair/ servicing. Please call for an RMA number.

WARRANTY
A. 3-Year warranty against manufacture defect.
B. The glass jar/ part(s) are not a warranty items.
C. The fuse(s) and thermo (low-water level) sensor safety-fuse are not a warranty items

120V, 780W, 6.5amps

1

**a** Match holes in metal plate to gaps in the plastic crown.

**b** Insert leg assembly into plastic crown

**C** Insert the screw and washer to secure leg assembly

---

2

**a** Remove preassembled screw and washer from the bottom of the telescoping pole.

**b** Match the telescoping pole to the center of the complete leg assembly.

**C** Insert the screw and washer to secure leg assembly.

**d** Check for wobbling parts. If wobbling, tighten all screws.

---

**CAUTION**

THE TELESCOPING POLE HAS STRONG SPRING TENSION.

DO NOT LOOSEN TENSION KNOB UNTIL THIS UNIT IS FULLY ASSEMBLED WITH THE VAPORIZER TOP SECURELY MOUNTED.

FAILURE TO FOLLOW DIRECTIONS MAY RESULT IN SERIOUS BODILY INJURY.

---

3

Place facial vaporizer onto telescoping pole.
